

Your codebase has **1614 issues.**

Ratchet fixes them while you sleep.

AI-powered autonomous code improvement. Scans your codebase, identifies production risks, and fixes them iteratively — with tests passing after every change.

Production Readiness Scan

Real results from a live Express/TypeScript/PostgreSQL app (809+ tests)

Score: 67 / 100

Ratchet scans 6 dimensions of production readiness: testing, security, type safety, error handling, performance, and code quality. Each uses granular proportional scoring — no cliff edges.

Testing

17/20

- ✓ 41 test files, 27% ratio
- ✓ 149 edge/error test cases
- ✓ 2.2 assertions per test

Security

14/16

- ✓ No hardcoded secrets
- ✓ Validation on 13 files
- ✓ Auth middleware + rate limiting

Type Safety

8/12

- ✓ Strict mode enabled
- ✓ 182 any types (moderate)

Error Handling

9/14

- ✓ 167 try/catch blocks
- ✓ 3 empty catches
- ✓ No structured logger

Performance

8/14

- ✓ 3 await-in-loop patterns
- ✓ 37 console.log calls
- ✓ Clean imports

Code Quality

11/24

- ✓ Avg 62-line functions
- ✓ 481 long lines
- ✓ 685 repeated lines

Issues Detected

1614 issues across 8 categories, prioritized by severity

COUNT	ISSUE	SEVERITY
112	source files without tests	high
45	async functions without error handling	high
3	empty catch blocks	high
685	repeated code lines	medium
182	any types	medium
64	functions >50 lines	medium
37	console.log calls	medium
481	long lines (>120 chars)	low

 **Sweep Mode — First Run**

Cross-cutting fix: targeted "source files without tests" across the entire codebase in a single autonomous run.

How Ratchet Works

One command. Autonomous improvement. Tests pass after every change.

01

Scan

Deep analysis across 6 dimensions and 12 subcategories. Detects real production risks — not style nits.

02

Prioritize

Issues ranked by severity × frequency × impact. High-severity items rise to the top automatically.

03

Fix

AI agent makes targeted changes — surgical single-file fixes or cross-cutting sweeps. Every change tested before commit.

04

Verify

Full test suite after every click. Broken tests = automatic rollback. Score recalculated to track real progress.

Two Modes, One Goal

⚡ Surgical Mode

Target a specific file or module. Up to 3 files, 40 lines per click. Focused improvements on hot paths.

🧹 Sweep Mode

Fix one issue type across the entire codebase. Up to 10 files per click, batched automatically.

Ship better code. Automatically.

Install Ratchet and run your first scan in 30 seconds.
